

Healios® Fact Sheet

Healios® Glutamine Disaccharide Complex For Oral Mucositis Relief

Description: Healios® is a dietary supplement designed to help patients who have difficulty swallowing due to chemotherapy and/or radiation treatment. Developed by an oncologist, Healios promotes and maintains the health of the epithelial cells and mucosal tissues of the digestive tract, particularly the mouth, throat, and esophagus. Combining glutamine with a blend of synergistic ingredients, then mixing with water, the glutamine-disaccharide complex increases glutamine absorption (>100-fold more than glutamine alone) – at the intended site of the mucosal lining.

To learn more about the science behind Healios and how it can help prevent and reduce the severity and duration of oral mucositis in cancer patients going through treatment, go to www.enlivity.com/healthcare-professionals.

Features:

- Unique formulation‡ facilitates rapid uptake of glutamine by mucosal cells at risk for injury.
- Designed to target mechanistic changes associated with the pathophysiology of oral mucositis
- Oral administration delivers glutamine directly to the target tissue in a safe and convenient way

Benefits:

- Promotes healthy mucosal lining in the mouth, throat and esophagus
- Helps patients maintain nutritional status, complete treatment and avoid hospitalizations

Product Use: Mix one scoop Healios (~5 g glutamine, which is the amount in a high-protein diet) with 50-100 ml of water in the enclosed bottle. Swirl and swish in the mouth for 10 seconds, then swallow. For best results, take twice a day after a meal.

Availability: To request a product sample or to order, visit www.enlivity.com/healthcare-professionals or call 888-552-9769, #5 (Mon-Fri, 9am-5pm PST).

About Us: Enlivity, an emerging medical nutrition company based in Boston, Massachusetts, is dedicated to delivering cancer supportive care products to patients so they can continue needed treatments, minimize clinical complications, and avoid hospitalization. Enlivity is focused solely on the cancer treatment side effects occurring in the oral and digestive tract that typically result in poor nutritional and hydration status. Enlivity provides targeted, over-the-counter product solutions to patients that would otherwise try a variety of general supportive care products to manage treatment symptoms.
